Description

Critical Regular

If you've got heavy harvests on the mind, you need a strain that can deliver time after time without compromise. Critical regular is the ideal choice, providing stable, productive genetics that won't disappoint.

Few strains can deliver potency and flavour without compromising yields. However, we bred Critical with a single focus—productivity. The strain is a cross of Afghan and Skunk genetics, capturing the best qualities of each—notably, a short stature and a lightning-fast flowering time. Because these are regular seeds, you can grow both male and female plants—perfect if you wish to do some experimentation of your own.

The flavour of Critical is a balanced blend of earthy, fruity, and pine tones, with a high that soothes and relaxes. Expect a very body-centric experience, perfect for physical relief. Critical regular offers a solid smoke well-suited to joints, pipes, and vaporizers. Powered by 18% THC, the high lasts long and travels from the mind to the body over the course of its stay. Those looking to enjoy a day-off or end-of-day smoke need look no further than Critical.

The greatest strengths of Critical regular are its productivity and reliability. The strain performs well in essentially all conditions, although warmer climates bring out the plant's full potential. A short flowering time of 7–9 weeks indoors ensures results even on a tight schedule, and, by staying under 140cm tall, you can grow multiple plants in a relatively small space. When all is said and done, look forward to superb yields of up to 600g/m². Outdoors, up to 650g/plant is possible from 2m-tall specimens.
