Description

OG Kush CBD

After years of hard work we finally achieved a cross that will turn heads in the medicinal field, combining the well know therapeutic qualities of OG Kush with high levels of CBD. Some phenotypes produce CBD levels that double the THC levels (ratio: 1:2) making it possible to maximise dosage levels while minimizing the psychoactive effects, a great companion for daily functional use. Also a great choice to make therapeutic oils and creams for oral or topical use. The plants structure consists of large, light green leaves, generous branches with a lot of internodal distance. When grown indoors, the use of tutors or SCROG/SOG is recommended to maximize yield. In an exterior setting the plant will require a lot of direct sunlight to assure large yields, to reach yields that surpass the kilo mark, the plant should be grown directly on soil. The buds are very tight and resin filled with hints of lemon, wood, earthy tones and gasoil.

60% sativa - 40% indica

THC: 12% - CBD: 12% - ratio thc/cbd: 1:1

Indoor vegetative period: 1- 2 week

Indoor flowering period: 7-8 week

Indoor yield/m2

: 450-500 gr

Outdoor height: 2-3 m

Outdoor harvest: mid october

Exterior yield/plant: 1 kg

Genotype: Og Kush x Medical CBD
