### Description

Do-Si-Dos Automatic

### Do-Si-Dos Automatic: Speed, Potency, and Fantastic Flavours

Do-Si-Dos Automatic merges the best traits of the original strain with the efficiency of autoflowering genetics. Experience the indica magic and sweet and earthy tastes of Do-Si-Dos in a fraction of the time. Suitable for novice and advanced growers alike, this strain provides an easy and rapid harvest on demand.

#### Do-Si-Dos Automatic: Genetic Background

Do-Si-Dos has made a large impact in the world of weed. We've been a fan of her effects for a long time, and our team of expert breeders were inspired to bring her traits into the autoflowering world. This move would make her more accessible to beginner growers and drastically reduce the time between germination and harvest.

By crossing the strain with Cookies Auto, we produced a fast, compact, and tasty specimen. Following several generations of stabilising the strain, Do-Si-Dos Automatic emerged as an indica-dominant cultivar with 60% indica genetics, 35% sativa, and 5% ruderalis.

#### Effects, Aroma, and Flavour of Do-Si-Dos Automatic

With a THC level of 20%, Do-Si-Dos Automatic clocks in as one of the strongest autoflowering strains you can grow. Not only that, but her crisp, sweet, and skunky aroma lifts the spirits before you even take your first toke. These earthy and citrusy terpenes synergise with THC to create a stoned and peaceful state of mind ideal for quiet evenings in.

Experienced smokers will be able to enjoy an entire joint or bong's worth of this bud before being stoned into oblivion, while novices will find themselves thoroughly high with much less. Though indica-dominant, her balanced effect allows users to relax, socialise, and create without falling asleep after a toke or two.

#### Growing Do-Si-Dos Automatic

Do-Si-Dos Automatic boasts high yields while remaining at a compact and easy to manage size throughout the entire growing cycle. Even in limited space, growers can expect to achieve great results with this stealthy variety.

Indoor plants reach a peak height of 120cm, but techniques such as low-stress training work to keep her at around 80cm. Expect impressive yields of 350–400g/m<sup>2</sup>, ready to harvest after only 9–10 weeks from germination (7–8 weeks of flowering).

Outdoor plants grow to slightly taller heights of around 140cm. Growers can also tame these specimens with LST to keep them out of sight. Be sure to sow companion plants close by early in the season to keep pests away and your plants concealed. Prepare to harvest around 100–150g/plant.
