Description

## Nevil Bilbo Auto

The resulting cannabis plant retains the aromatic characteristics of pure incense and the metallic taste of his mother Neville Haze.

The crossing reduces the days of flowering and the size of the plant, which were the reasons that this Sativa seed was so little commercial as make it more productive.

In Indoor we recommend putting from germination to 12 hours and get the maximum number of plants to take full advantage of this strain, outdoor plants reach a considerable size reaching over 180 cm in optimal conditions.

Its production is very high for being so sativa reaching more than 500 gr indoor , offsetting their time waiting 10 weeks for harvest.
