Description

Skunk #1 Auto

Skunk #1 is quite simply one of the most important cannabis strains ever created. As one of the first stabilised Indica-Sativa hybrids, its history stretches back at least 30 years. In that time, Skunk #1 and its countless descendants have directly affected worldwide cannabis culture more than any other variety.

For novice and experienced growers alike, Skunk #1 Automatic is one the easiest, fastest ways to produce high quality medicinal or recreational cannabis! Even in a long day, Skunk #1 Automatic normally begins flowering less than a month after seedlings first sprout from the soil. Once started, the blooming phase is vigorous and productive, lasting for 45 to 55 days and lowering plants will not revert to vegetative growth.

Skunk #1 Automatic performs superbly under lights and, in spring and summer, can also flourish outdoors at most locations below about 45°N. In shorter or cooler summers, the germination of auto-flowering seeds can timed so that their blooming phase is in synch with the sunniest days of June or July, rather than the cooler days of September, which allows them to reach their full potential.

The mature buds of Skunk #1 Automatic are large and dense, sparkling with THC-rich resin glands and fully living up to the high standards of her ancestors. Their taste and effect should be familiar to most cannabis lovers – a delicious sweetly pungent flavour followed by a massively powerful combination of stone and high!

Indica

The Skunk #1 Auto strain has large proportion of Indica genes in its background.

Short flowering period

Skunk #1 Auto will have a comparatively short flowering time.

Compact plant

Skunk #1 Auto will have relatively small height gain during the flowering phase.

Medium Yield

Skunk #1 Auto will produce a decent amount of bud

Temperate / Continental

Skunk #1 Auto can be grown outside in a normal warm summer.
