Description

Y Griega

Plant's growth begins with a dramatic force, so it is advisable to grow it in SCROG, because becomes more controllable.

Unlike other sativas, this plant surprises us with a production of robust, large and extremely resinous buds that cover the stems.

In an analysis performed by gas chromatography Canna Resort has earned the highest level of THC among all our plants.

This plant maintains a classic haze scent, which is combined with a slight sweet touch that makes it stand out.

Its effect begins with an energy jolt slowly fired in a state of alertness and relaxation.

Especially recommended for conditions requiring high levels of THC and glaucoma.
